SKELITE TALENT PARTNERS

HR Analytics Pack

11 assets · Rs 599

Sample pages. The pages that follow are taken unedited from the pack you receive.

WHAT YOU GET

- 11 files: 5 Word guides, 6 working Excel dashboards
- Hiring, attrition, headcount, engagement, cost and a founder scorecard
- Attrition cut by tenure, department and manager, with regretted split
- Cost of attrition model that puts a rupee figure on losing one person
- No benchmark figures anywhere. Every number comes from your own data.

WRITTEN AGAINST THE LAW AS IT STANDS

The four Labour Codes commenced 21 November 2025. Central rules followed in May 2026. Every document states the position it was written against.

Start Here — HR Analytics

Pack 12 — HR Analytics | Ref: P12-00

Six working dashboards and the discipline that makes them worth looking at.

WHAT THIS PACK IS

Six Excel dashboards that turn your HR data into the three or four numbers a founder actually needs, plus the guides that stop those numbers being wrong.

Most HR reporting fails for one of two reasons. Either nobody agreed what the numbers mean, so every meeting becomes an argument about definitions. Or the numbers are correct but nobody can say what to do about them. This pack is built against both.

THERE ARE NO BENCHMARK NUMBERS IN THIS PACK, AND THAT IS DELIBERATE

You will not find "good attrition is 12 percent" anywhere in here.

Published Indian HR benchmarks swing enormously by sector, city, company size and the year they were collected, and most of the ones circulating online do not state a methodology at all. A target set from a number nobody checked is worse than no target.

Every dashboard calculates from your own data. File 01 shows you how to build your own baseline from your first six months, which is the only benchmark that is actually about your company.

WHAT IS INSIDE

File	What it is	Type
00	This guide	Word
01	The HR metrics that actually matter	Word
02	Running the monthly HR review	Word
03	Data definitions standard	Word
04	Hiring analytics dashboard	Excel
05	Attrition analytics dashboard	Excel
06	Headcount and diversity dashboard	Excel
07	Engagement and survey analytics	Excel
08	Payroll and people cost analytics	Excel
09	HR scorecard, one page for the founder	Excel
10	Writing up what the numbers say	Word

The HR Metrics That Actually Matter

Pack 12 — HR Analytics | Ref: P12-01

How to choose three numbers, define them properly, and build your own baseline.

START BY CUTTING, NOT ADDING

There are perhaps forty HR metrics in common use. Almost all of them are measurable. Very few of them change a decision.

The test for whether a metric belongs on your report is simple and it is not whether it is interesting. It is this:

THE TEST

If this number moved by twenty percent, would anyone do anything differently?

If the honest answer is no, it does not go on the report. It can still sit in a spreadsheet for when someone asks.

THE METRICS WORTH HAVING, BY WHAT THEY TELL YOU

If you are hiring hard

Metric	What it actually tells you	The trap
Time to fill	How long a role sits open, requisition to accepted offer	Measured from the wrong start date. Agree it in file 03.
Offer acceptance rate	Whether your offers are competitive and your process leaves people wanting the job	A high rate can mean you are overpaying, not that you are winning
Source effectiveness	Which channels produce hires, not applications	Counting applications. Referrals look weak on volume and strong on hires.
Cost per hire	What hiring actually costs you, including your own time	Leaving out internal time, which makes agencies look worse than they are
First year attrition	Whether you are hiring the right people, or just filling seats	The single most under-used hiring metric. See below.

IF YOU ONLY ADD ONE METRIC THIS YEAR, ADD FIRST YEAR ATTRITION

The share of people who leave within twelve months of joining.

Every other hiring metric measures how efficiently you filled a seat. This one measures whether you filled it with the right person. A company with excellent time to fill and bad first year attrition is hiring fast and badly, and no other number on the report will tell you that.

If you are losing people

Metric	What it actually tells you	The trap
Overall attrition	The headline, and the least useful cut of it	Stopping here. The average hides everything that matters.
Attrition by tenure	Whether you have a hiring problem, an onboarding problem or a progression problem	Not splitting it. The split is the insight.
Attrition by manager	Usually the real answer	Being afraid to look. Look anyway.
Regretted vs non-regretted	Whether you are losing people you wanted to keep	Not classifying leavers at exit, so you can never calculate it later
Voluntary vs involuntary	Keeps your own terminations out of the attrition story	Mixing them, which flatters or damns you depending on the quarter

Attrition by tenure is where most of the value sits, and it is worth being explicit about how to read it.

- **Heavy losses in the first 90 days** usually an onboarding or expectation-setting problem, and sometimes a job description that described a different job
- **Heavy losses between 6 and 18 months** usually a manager problem or a progression problem. The honeymoon ended and nothing replaced it.
- **Heavy losses after 3 years** usually a pay or ceiling problem. They can see there is nowhere else to go.

If you are worried about cost

Metric	What it actually tells you	The trap
People cost as a share of revenue	Whether your team is sized to your business	Comparing across sectors. It is meaningless outside your own industry.
Revenue per employee	Productivity, roughly, and only as a trend	Treating it as a performance measure for individuals
Cost of attrition	What the leaving is actually costing you	Never calculating it, so retention spend always looks expensive
Compa-ratio	Whether people are paid consistently against your own bands	Needs bands to exist first. Pack 06 and Pack 14 cover that.

BUILDING YOUR OWN BASELINE, WHICH IS THE ONLY BENCHMARK THAT MATTERS

You will be tempted to look up what good looks like. Resist it for one quarter.

1. **Measure for three months without judging.** — Just collect. Do not set a target, do not report it upward, do not react to a single month.
2. **At the end of three months, write the number down.** — That is your baseline. It is not good or bad. It is yours.
3. **Set your next target against yourself.** — "First year attrition from 31 percent to under 25 percent by March" is a real target. "Industry standard" is not.
